

Java Curriculum Map

Start Your Engines

- The “Start Your Engines” series is for students who are either new to programming or who need to understand Java from a conceptual viewpoint, with less emphasis on hands-on development.
- The “Java for Non-Programmers” course can be used as a stepping block to the “Behind the Wheel” series for students who are new to programming or who have minimal programming experience.

Behind the Wheel

- The “Behind the Wheel” series is for students who need to learn how to program in Java. There is basically one course at this level, with a faster version available for experienced object-oriented programmers.

Under the Hood

- The “Under the Hood” series is for our more advanced Java topics. Students should be familiar with developing Java applications and the topics covered at the “Behind the Wheel” level.
