Classroom Setup Guide

Course Title: Apache Velocity

Hardware Requirements: The Apache Software Foundation does not define any specific hardware requirements for Velocity. We recommend the following at a minimum:

- For Intel-based PCs, at least 1GB of RAM.
- For Unix-based machines, basically any configuration will work.
- An Internet connection
- If possible, the PCs will be networked together.

Software Requirements: One aspect of this course is that the students learn how to install the software. The only requirements for software are:

- For Intel-based PCs, Windows NT/2000/XP.
- The Java SE Development Kit (JDK) available at <http://java.sun.com/javase/downloads/index.jsp>. Download the installable executable and install the JDK using all the defaults.
- Tomcat 6 Server (the .zip file) available at <http://tomcat.apache.org/download-60.cgi>. Look for the "Core" .zip file under "Binary Distributions". To install Tomcat, simply unzip the downloaded file directly onto the c:\ drive. (An appropriate subfolder will be created.)
- Web browser, preferably Firefox.
- Text editor. For Windows, we recommend TextPad, available at <http://www.textpad.com>.
